

Thermometer hygrometer data logger - Economy Version

code: S3120E

Data logger is designed for record of temperature and humidity. Values are stored to a non volatile electronic memory. Data transfer to the personal computer for further analysis is performed via USB, RS232, GSM or Ethernet interface by means of a proper communication adapter. The device **includes Traceable calibration certificate** with declared metrological traceability of etalons is based on requirements of **EN ISO/IEC 17025 standard**.

For communication with the PC must be from Optional accessories ordered <u>USB adapter</u> or <u>COM adapter</u> or <u>start/stop magnet</u> if is needed to control logging the other way than directly from computer.
